

ON PREMISE SOLUTIONS - QuickRoll

Castus QuickRoll is our flagship, multi processing, multi channel, video scheduling server that includes everything you need to easily upload, schedule and play your video content. QuickRoll features an easy to use, web based interface, allowing you to access your station from any computer or mobile device.

QuickRoll Playout Server

Web browser based user interface.

You will have the ability to play out SD and HD signals simultaneously, from 1 to 10 inputs or outputs, all while outputting a live IP feed. Overlay up to eight regions per channel, including scrolling texts and station logos, and choose from 8-32TB of internal RAID protected storage. Quickroll is the premium solution for your multi channel broadcasting needs.

ON PREMISE SOLUTIONS - QuickCast

QuickCast is a revolutionary, single channel SD/HD - SDI server that includes everything you need to schedule and playout your station's video content, all for a one time cost of \$9,995. You can easily upload, schedule, and play almost any file format with zero transcoding.

QuickCast Playout Server

Web browser based user interface.

With QuickCast you can air one live input while recording it to disc, overlay up to 4 regions on top of scheduled playout, schedule text crawls and station logos, store up to 4TB of programming, all in a single sleek 2U chassis. QuickCast features an easy to use, web based interface that is accessible from anywhere, anytime, with a real time channel monitor built in.

ON PREMISE SOLUTIONS - CASTUS Mini

Encode, decode or BOTH. CASTUS Mini is compact, easy to set up and affordable. CASTUS Mini connects to STREAM and VOD in seconds with the ability to add overlays on your feeds. Schedule live events, record inputs or add graphics. At 10 lbs, 9" x 8.5 deep, the CASTUS Mini is no small package to be reckoned with.
