For Immediate Release:
November 2019

NDI

CASTUS now offers NewTek NDI support for inputs and outputs

Issaquah, WA - CASTUS, a leader in video scheduling systems and live streaming solutions, is proud to announce seamless integration with NewTek's NDI protocol. NDI allows users to utilize their personal LAN to share high quality video with both low bandwidth and low latency. While other services require an external encoder to receive an NDI signal, CASTUS takes the signal internally with no additional hardware needed. CASTUS has provided NDI integration since November 2019 and will continue to offer out-of-the-box support for the life of the product with no paid updates.

About CASTUS (www.castus.tv)

CASTUS provides flexible software scheduling systems and video playout servers. Manage your TV stations and all your digital signs through one interface.

Developed by professionals of broadcast software development and video production. We are partnered with industry leaders to ensure continued development with professional broadcast hardware. This gives us an advantage of always knowing what technology is in demand and what is yet to come. CASTUS is built on a Linux operating system to ensure reliability, future growth, security, and ease of use.
